

Handy Password

Handy Password is the high-rated password manager and form filler that considerably simplify the process of navigating through the Web pages.

The application is fully integrated in Internet Explorer. It appears as a toolbar built in the browser and providing all necessary tools to make surfing the Web more comfortable. The latest version of the program – Handy Password 3.8.0 even includes a web search box allowing to run preferred search engines without entering its web page or downloading toolbars.

With this secure and reliable application, extremely helpful to any internet user, there is no more the need to keep in mind a lot of information required to enter e-shops, forums, mail servers and other web pages offering a number of forms to fill in. Logins and passwords, PIN-codes, banking account details, credit card numbers can be easily entrusted to Handy Password.

The information saved with the program will be securely stored in a single file, encrypted with strong encryption algorithm and inaccessible to anybody else.

Starting the program the user has to do nothing but input only one password to get access to all visited sites and web places. All checkouts and login forms are filled in with a single mouse click on the Handy Password toolbar. Also for filling in long registration and checkout forms the Drag&drop function can be used.

When entering a new site requiring registration or form filling Handy Password automatically fills in your identities and generates random crack-proof passwords to be memorized and used if needed.

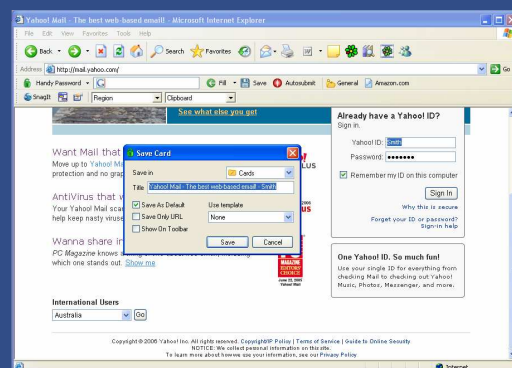

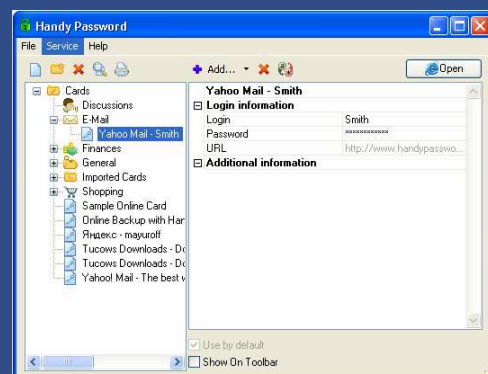

Handy Password is supplied with a convenient system of cards allowing users to keep bookmarks along with the login data of visited web resources. These bookmarks help surfing the Web easier and faster. The card system can contain offline information as well. Phone numbers, emergency contacts, passport and social security data, and a lot of other important information can be kept with Handy Password. Templates facilitate entering data which can be systematized by creating folders in the folders tree and moving cards between folders. In case of need the cards can be searched, edited and printed.

Handy Password has keyboard shortcuts, which make navigating the Web much more convenient. It is enough to press a key or a key combination to fill out forms and submit information.

Handy Password is a secure and reliable password manager widely used not only by people with memory or mobility impairments, who can be fully confident that their important data will never be lost and will eventually be retrieved at any moment with minimum efforts. The application can also be extremely helpful to any internet user valuing his time spent on filling out web forms.
